

Over-Voltage Protection Load Switch

FPF2290

WLCSP12
 CASE 567QX

General Description

The FPF2290 features a low- R_{ON} internal FET and an operating voltage range of 2.5 V to 23 V. An internal clamping circuit is capable of shunting surge voltages of ± 100 V, protecting downstream components and enhancing system robustness. The FPF2290 features over-voltage protection that powers down the internal FET if the input voltage exceeds the OVP threshold. The OVP threshold is selectable via Logic select pins (OV1 and OV2). Over-temperature protection also powers down the device at 130°C (typical).

The FPF2290 is available in a fully “green” compliant 1.3×1.8 mm Wafer-Level Chip-Scale Package (WLCSP) with backside laminate.
