8-Bit Addressable Latch 1-of-8 Decoder with LSTTL **Inputs**

High-Performance Silicon-Gate CMOS

The MC74HCT259A is identical in pinout to the LS259. The device inputs are compatible with standard CMOS and LSTTL outputs.

The HCT259A has four modes of operation as shown in the mode selection table. In the addressable latch mode, the data on Data In is written into the addressed latch. The addressed latch follows the data input with all non-addressed latches remaining in their previous states. In the memory mode, all latches remain in their previous state and are unaffected by the Data or Address inputs. In the one-of-eight decoding or demultiplexing mode, the addressed output follows the state of Data In with all other outputs in the LOW state. In the Reset mode all outputs are LOW and unaffected by the address and data inputs. When operating the HCT259A as an addressable latch, changing more than one bit of the address could impose a transient wrong address. Therefore, this should only be done while in the memory mode.

Features

- Outputs Directly Interface to CMOS, NMOS, and TTL
 Operating Voltage Range 4.5
- Low Input Current: 1 µA
- THIS DEVICE PLEASENTA High Noise Immunity Characteristic of CMOS Device
- These are Pb-Free Devices

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, Vin and V_{out} should be constrained to the range GND \leq (V_{in} or V_{out}) \leq V_{CC}. Unused inputs must always be tied to an appropriate logic voltage level (e.g., either GND or V_{CC}). Unused outputs must be left open.

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device

- Tested to EIA / JESD22-A114-A.
 Tested to EIA / JESD22-A115-A.
- 3. Tested to EIA / JESD78.
