

3.3 V Automotive Grade LVDS Driver

NBA3N011S

Description

The NBA3N011S is a Low Voltage Differential Signaling (LVDS) driver for low power and high data rate applications. The device accepts LVCMOS/TTL input and translates it to LVDS and is designed to support data rates higher than 400 Mbps (200 MHz).

The driver provides low EMI with a typical output swing of 350 mV. The device can be paired with its companion single line receiver NBA3N012C or with any other LVDS receiver for high speed LVDS interface.

The LVDS output is designed as a 3.5 mA (typical) current mode driver allowing low power dissipation even at the high frequency.
