

2-Bit 20 Mb/s Dual-Supply Level Translator

NLSX0102

The NLSX0102 is a 2-bit configurable dual-supply bidirectional auto sensing translator that does not require a directional control pin. The I/O V_{CC} and I/O V_L ports are designed to track two different power supply rails, V_{CC} and V_L respectively. Both the V_{CC} and V_L supply rails are configurable from 1.65 V to 5.5 V. This allows voltage logic signals on the V_L side to be translated into voltage logic signals on the V_{CC} side, and vice-versa.

The NLSX0102 translator has integrated 10 k Ω pull-up resistors on the I/O lines. The integrated pull-up resistors are used to pull-up the I/O lines to either V_L or V_{CC} . The NLSX0102 is an excellent match for open-drain applications such as the I²C communication bus.

Features

- Wide V_{CC} Operating Range: V_L to 5.5 V
Wide V_L Operating Range: 1.65 V to 5.5 V
- High-Speed with 24 Mb/s Guaranteed Data Rate
- Low Bit-to-Bit Skew
- Enable Input and I/O Pins are Overvoltage Tolerant (OVT) to 5.5 V
- Non-preferential Power-up Sequencing
- Integrated 10 k Ω Pull-up Resistors
- Small Space Saving Package
– 1.9 mm x 0.9 mm x 0.5 mm Flipchip8
- This is a Pb-Free Device

Typical Applications

- I²C, SMBus
- Low Voltage ASIC Level Translation
- Mobile Phones, PDAs, Cameras

Important Information

- ESD Protection for All Pins
– Human Body Model (HBM) > 7000 V

APPLICATIONS INFORMATION

Level Translator Architecture

The NLSX0102 auto sense translator provides bi-directional voltage level shifting to transfer data in multiple supply voltage systems. This device has two supply voltages, V_L and V_{CC} , which set the logic levels on the input and output sides of the translator. When used to transfer data from the V_L to the V_{CC} ports, input signals referenced to the V_L supply are translated to output signals with a logic level matched to V_{CC} . In a similar manner, the V_{CC} to V_L translation shifts input signals with a logic level compatible to V_{CC} to an output signal matched to V_L .

The NLSX0102 consists of two bi-directional channels that independently determine the direction of the data flow without requiring a directional pin. The one-shot circuits are used to detect the rising or falling input signals. In addition, the one shots decrease the rise and fall time of the output signal for high-to-low and low-to-high transitions. Each input/output channel has an internal 10 k Ω pull-up. The magnitude of the pull-up resistors can be reduced by connecting external resistors in parallel to the internal 10 k Ω resistors.

Input Driver Requirements

The rise (t_R) and fall (t_F) timing parameters of the open drain outputs depend on the magnitude of the pull-up resistors. In addition, the propagation times (t_{PD}), skew (t_{PSKEW}) and maximum data rate depend on the impedance

of the device that is connected to the translator. The timing parameters listed in the data sheet assume that the output impedance of the drivers connected to the translator is less than 50 k Ω .

Enable Input (EN)

The NLSX0102 has an Enable pin (EN) that provides tri-state operation at the I/O pins. Driving the Enable pin to a low logic level minimizes the power consumption of the device and drives the I/O V_{CC} and I/O V_L pins to a high impedance state. Normal translation operation occurs when the EN pin is equal to a logic high signal. The EN pin is referenced to the V_L supply and has Overvoltage Tolerant (OVT) protection.

Power Supply Guidelines

During normal operation, supply voltage V_L must be less than or equal to V_{CC} . The sequencing of the power supplies will not damage the device during the power up operation. For optimal performance, 0.01 μ F to 0.1 μ F decoupling capacitors should be used on the V_L and V_{CC} power supply pins. Ceramic capacitors are a good design choice to filter and bypass any noise signals on the voltage lines to the ground plane of the PCB. The noise immunity will be maximized by placing the capacitors as close as possible to the supply and ground pins, along with minimizing the PCB connection traces.
