MOSFET – Power, Complementary ChipFET 20 V, +3.9 A / -3.0 A

Features

- Complementary N-Channel and P-Channel MOSFET
- Small Size, 40% Smaller than TSOP-6 Package
- Leadless SMD Package Featuring Complementary Pair
- ChipFET Package Provides Great Thermal Characteristics Similar to Larger Packages
- Low R_{DS(on)} in a ChipFET Package for High Efficiency Performance
- Low Profile (< 1.10 mm) Allows Placement in Extremely Thin Environments Such as Portable Electronics
- These Devices are Pb–Free, Halogen Free/BFR Free and are RoHS Compliant

Applications

- Load Switch Applications Requiring Level Shift
- DC–DC Conversion Circuits
- Drive Small Brushless DC Motors
- Designed for Power Management Applications in Portable, Battery Powered Products

MAXIMUM RATINGS (T_J = $25^{\circ}C$ unless otherwise noted)

Parame	Parameter							
Drain-to-Source Voltage			V _{DSS}	20	v			
Gate-to-Source Voltage			V _{GS}	±12	V			
Continuous Drain Current (Note 1)	N-Ch Steady State	T _A = 25°C T _A = 85°C	L ^B	2.9 2.1	A			
	t ≤ 5	$T_A = 05 \text{ C}$ $T_A = 25^{\circ}\text{C}$	SEL	3.9

BASIC PAD PATTERNS

The basic pad layout with dimensions is shown in Figure 22. This is sufficient for low power dissipation applications, but power MOSFET semiconductor performance requires a greater copper pad area, particularly for the drain leads.

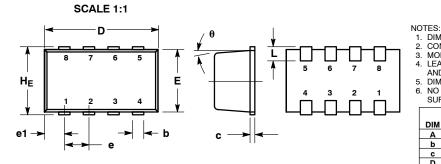

The minimum recommended pad pattern shown in Figure 23 improves the thermal area of the drain THIS DEVICE REPRES connections (pins 5, 6, 7, 8) while remaining within the

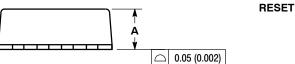

RMATION confines of the basic footprint. The drain copper area is 0.0019 sq. in. (or 1.22 sq. mm). This will assist the power dissipation path away from the device (through the copper lead-frame) and into the board and exterior chassis (if applicable) for the single device. The addition of a further copper area and/or the addition of vias to other board layers will enhance the performance still further.
