

# HBL1015, HBL1025 Series

## LED Shunt

The HBL1015/25 Series are electronic shunts which provide a current bypass in the case of LEDs going into open circuit. LEDs are by nature quite fragile when subjected to transients and surge conditions. There are also many cases where high reliability of the LED lighting must be maintained such as in headlights, lighthouses, bridges, aircraft, runways and so forth. In these cases the low cost addition of the HBL device will provide full assurance that an entire string of LEDs will not extinguish should one LED fail open. The HBL device is also applicable to other loads where circuit continuity is required. The devices can be used with LED string currents from 140 to 500 mA.

### Features

- A Bidirectional Device
- Automatically Resets Itself if the LED Heals Itself or is Replaced
- ON-State Voltage Typically 1.8 V
- OFF-State Current less than 0.5  $\mu$ A
- These are Pb-Free Devices

### Typical Applications

- LEDs where Preventive Maintenance is Impractical
- LED Headlights
- LEDs with High Reliability Requirements
- Crowbar Protection for Open Circuit Conditions
- Overvoltage Protection for Sensitive Circuits

1. Device is bidirectional. Either configuration shown is acceptable.
2. Pin 2 must be electrically floating

### ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 4 of this data sheet.

# HBL1015, HBL1025 Series

## MAXIMUM RATINGS

Rating	Symbol	Value	Unit
On-State Current, ( $T_A = 25^\circ\text{C}$ ) (Note 1) (Note 2) (Note 3)	$I_{T(AVG)}$	500 425 250	mA
Thermal Resistance, Junction-to-Air (Note 1) (Note 2) (Note 3)	$\theta_{JA}$	140 150 255	$^\circ\text{C/W}$
Operating Temperature Range	$T_J$	-40 to 150	$^\circ\text{C}$
Non-Operating Temperature Range	$T_J$	150	$^\circ\text{C}$
Lead Temperature, Soldering (10 Sec)	$T_L$	260	$^\circ\text{C}$

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Mounted onto a 1500 mm<sup>2</sup>, Denka K1, 1.5 mm Al, 2 kV thermally conductive dielectric, 2 oz. Cu, or equivalent board. Heat sinking should be spread equally among all pins (caution: pin 2 must be electrically isolated).
2. Mounted onto a 2-layer, 1000 mm<sup>2</sup> per layer, 3 oz Cu, FR4 PCB. Heat sinking should be spread equally among all pins (caution: pin 2 must be electrically isolated).
3. Mounted onto a 2-layer, 50 mm<sup>2</sup> per layer, 1 oz Cu, FR4 PCB. Heat sinking should be spread equally among all pins (caution: pin 2 must be electrically isolated).

NOTE: Normally this device would be mounted on the same copper heat sink and adjacent to the LED(s). If the LED(s) were to go open, then the HBL shunt would now dissipate the power using the same copper heat sink. Since the HBL has a voltage that is lower than that of the LED(s), then the power dissipation would be easily handled by the same heat sink as the LED.

## ELECTRICAL CHARACTERISTICS (Unless otherwise noted: $T_A = 25^\circ\text{C}$ )

Symbol	Characteristics	Min	Min	Typ	Max	Unit
$V_{(BR)}$	Breakdown Voltage: The minimum voltage across the device in or at the breakdown region. Measured at $I_{BR} = 1$ mA.	HBL1015	8.0			V
		HBL1025	11.5			
$I_H$	Holding Current: The minimum current required to maintain the device in the on-state.	HBL1015			125	mA
		HBL1025			125	
$V_{BO}$	Breakover Voltage: The voltage across the device in the breakover region. Measured at $I_{BO} = 10$ mA.	HBL1015			14.0	V
		HBL1025			16.0	
$I_R$	Off-State Current: The dc value of current that results from the application of the off-state voltage. This is measured at 8.0 V for HBL1015 and 11.5 V for HBL1025.	HBL1015			0.5	$\mu\text{A}$
		HBL1025			0.5	
$V_T$	On-State Voltage	HBL1015	1.2	1.8	2.4	V
		HBL1025	1.2	1.8	2.4	

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

(Note: Microdot may be in either location)

\*This information is generic. Please refer to device data sheet for actual part marking. Pb-Free indicator, "G" or microdot "▪", may or may not be present. Some products may not follow the Generic Marking.

NOTES:

1. DIMENSIONING AND TOLERANCING CONFORM TO ASME Y14.5-2018.
2. ALL DIMENSION ARE IN MILLIMETERS (ANGLES IN DEGREES).
3. MAXIMUM LEAD THICKNESS INCLUDES LEAD FINISH THICKNESS. MINIMUM LEAD THICKNESS IS THE MINIMUM THICKNESS OF BASE MATERIAL.
4. DIMENSIONS D AND E1 DO NOT INCLUDE MOLD FLASH, PROTRUSIONS OF GATE BURRS. MOLD FLASH, PROTRUSIONS, OR GATE BURRS SHALL NOT EXCEED 0.15 PER SIDE. DIMENSION D.
5. OPTIONAL CONSTRUCTION: AN ADDITIONAL TRIMMED LEAD IS ALLOWED IN THIS LOCATION. TRIMMED LEAD NOT TO EXTEND MORE THAN 0.2 FROM BODY.

DIM	MILLIMETERS		
	MIN.	NOM.	MAX.
