

4-Bit Configurable Dual-Supply Transceiver with 3-State Outputs

Product Preview

T30LMXT3V4T245

The T30LMXT3V4T245 is a 4-bit configurable dual-supply translating bidirectional transceivers with 3-state outputs. The A- and B-ports are designed to track two different power supply rails, V_{CCA} and V_{CCB} respectively. Both supply rails are configurable from 0.9 V to 3.6 V allowing universal bidirectional voltage translation between the A- and B-ports.

The T30LMXT3V4T245 transceiver consists of 2 groups of 2-bit transceivers, each of which may be independently controlled by its own direction (1DIR, 2DIR) and output enable pins ($\overline{1OE}$, $\overline{2OE}$). The Direction inputs, 1DIR and 2DIR, determine the direction of data flow for each group. When nDIR is High, data flows from nA to nB. When nDIR is Low, data flows from nB to nA. The Output Enable inputs, $\overline{1OE}$ and $\overline{2OE}$, when High, disables both A- and B-ports of group 1 and 2 respectively, by putting them in 3-state. The 1DIR, 2DIR, $\overline{1OE}$ and $\overline{2OE}$ signals are designed to track V_{CCA} .

FUNCTION TABLE

\overline{nOE}	nDIR	Operating Mode
L	L	nB to nA
L	H	nA to nB
H	X	n Ports at Hi-Z

Application Recommendations

During power-up and power-down, it is recommended that the \overline{nOE} pins be connected to V_{CC} through pull-up resistors to ensure high impedance at the I/O ports. During normal operation, it is also recommended that the ports be disabled before changing the DIR state. Then, the ports may be enabled again. These should prevent contention and data errors.
