Flammability Information

All materials present in the power module meet UL flammability rating class 94V-0 or higher.

Compliance to RoHS Directives

The power module is 100% lead free and RoHS compliant 2000/53/C directive.

Solder

Solder used is a lead free SnAgCu alloy. Base of the leads, at the interface with the package body should not be exposed to more than 200°C during mounting on the PCB, this to prevent the remelt of the solder joints.

ABSOLUTE MAXIMUM RATINGS (T_J = 25°C unless otherwise specified)

Symbol	Parameter	Value	Unit
V _{DS}	Drain-to-Source Voltage	100	V
V _{GS}	Gate-to-Source Voltage	±20	V
E _{AS}	Single Pulse Avalanche Energy (I _{PK} = 50 A)	587	mJ
T _{J(max)}	Maximum Junction Temperature	175	°C
T _{STG}	Storage Temperature Range	-45 to 150	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

- All bare die have the same size and on resistance, However, on resistance values of each FETs could be different in the datasheet because of different access path inside the module. The value of Q4 is the rating of $R_{DS(ON)}$ of MOSFET of this module and be used for the power loss calculation because their values are close to the actual MOSFET $R_{DS(ON)}$ sensing by Kelvin pin.
- Module R_{dson} means total resistance of the measurement path between Power terminals, referring to the resistance measurement methods table.
- The maximum value is specified by design at $T_J = 175^{\circ}\text{C}$. Product is not tested to this condition in production.
