

1/4-inch 2 MP CMOS Digital Image Sensor

AR0246

ODCSP53
CASE 570AA

General Description

The **onsemi** AR0246 is a stacked 1/4-inch back side illuminated (BSI) CMOS active-pixel digital image sensor with a pixel array of 1920 (H) x 1080 (V). The sensor has enhanced NIR response. It captures images in either linear or high dynamic range modes with a rolling shutter readout, and includes sophisticated camera functions such as binning, windowing and both video and single frame modes. It is designed for both low light and high dynamic range performance. AR0246 can combine on chip up to three exposures and compand to 12-bit HDR output (eHDR) or it could provide line interleaved output of two exposures to support off chip HDR (LI HDR) in an ISP chip. It could also provide enhanced Dynamic Range (eDR) from single exposure. The AR0246 produces extraordinarily clear, sharp digital pictures, and its ability to capture both continuous video and single frame enhanced NIR response makes it the perfect choice for security applications.
